

Wool pellets are made from 100% raw wool sourced from our farm as well as other NYS sheep farms. Wool pellets are environmentally friendly as they are:

- organic since wool pellets have nothing added - they are just raw wool
  - Sustainable and renewable since sheep grow wool that has to be sheared 1 to 2 times per year
  - Climate beneficial as sheep sequester atmospheric carbon in their wool as they graze
  - Non-toxic to pollinators
- Every purchase of wool fertilizer pellets and soil amendment helps to support NYS sheep farms and the environment.

## About Our Farm

Otter Lake Farm & Fiber is a woman-owned, New York State Grown & Certified Farm located in the Town of Catö, NY. Kate Pelkey is the sole proprietor and began raising sheep for textile and meat production in 2017. In 2024, Kate, who is a vegetable and fruit gardener, invested in a wool pelleting mill and began making wool pellets in an effort to offer a completely natural fertilizer and soil amendment for all types of plants including ornamental gardens, potted plants, raised beds, and in-ground vegetable & fruit gardens.

## WOOL FERTILIZER & SOIL AMENDMENT PELLETS

AN INNOVATIVE, NATURAL AND EFFECTIVE WAY TO FEED PLANTS AND AMEND SOIL
